Re: Application/Control Number: 10/661,933

Front-load Sink/Laundry Combo

Sir,

In response to the Office Action Summary, dated January 5, 2007, enclosed herewith is a modified list of claims.

In accordance with this modification claims 1 to 30 are withdrawn (canceled). Claim 31 was withdrawn earlier. Claims 32, 33 and 34 are added as new claims.

Modification was done on a base that in none of disclosed arts was claimed the following:

1. P-trap configured flash to the wall with a tank-like expansion attached to the lower part of a cabinet and used for accumulation of large amount of running waste water which works as unit's cabinet static and dynamic vibration absorber.
2. Waste water and hot air from dryer are connected to the same drain line. Waste water goes via P-trap and hot air goes direct to waste line bypassing P-trap utilizing air vent system of the waste line.
3. Water-filled washable (self cleaning) lint trap is built-in in a tank-like expansion of P-trap.

Please see enclosed new list of claims.

Thank you,

Boris Usherovich
